

MPLS IPVPN

1

Connectivity options

Connect all of your customers' geographically dispersed sites. Each site can choose from a range of connectivity options to suit each requirement.

2

Connect to the network

Sites are connected by a VPN allowing you to be able to securely transport traffic with different levels of prioritisation between each location. It also allows customers to securely connect equipment hosted in our data centre securely.

3

Connection management

Your customer can have internet breakout with the option of a managed firewall keeping their network secure. Each solution has a management portal which allows them to view each sites uptime and usage.
